

Jefferson Neurobehavioral Group

## About Jefferson Neurobehavioral Group

Since its founding in 1997, Jefferson Neurobehavioral Group has been providing clinical psychology, neuropsychology, and behavioral medicine services for adults, adolescents, and children living in the Gulf South. Our doctors remain current on available scientific literature providing the best and most current assessment, treatment, and rehabilitation services, maintaining a "best practices" approach.

In an effort to elevate assessment and therapy services to leverage available technological advancements, Dr. Aaron Wolfson is coordinating JNG's TeleMental Health program. TeleMental Health services will also be provided by: Dr. Kevin Bianchini, Dr. Kevin Greve, and others.

For more information contact our main office at 504-780-1702.

*is pleased to offer*

## *Pain-Psychological Evaluations via Telemedicine*

Telemedicine affords live patient/doctor communication remotely, with our clinician in the Jefferson Neurobehavioral Group main office and the patient in one of our regional clinics.

## TELEMENTAL HEALTHCARE

Jefferson Neurobehavioral Group has partnered with Advanced TeleMedical Solutions, to offer a secure telemedical conferencing option for long distance pain psychological, presurgical psychological, and second opinion patient evaluations.

When a pain psychologist travels to conduct clinical interviews, evaluations can become cost prohibitive to some third party payers. Nonetheless, making or approving treatment recommendations without the benefit of a comprehensive pain psychological evaluation may be equally problematic.

Widely supported in the contemporary psychology community, telemental healthcare provides the capacity for psychologists to offer remote psychological services that approximate the efficacy of traditional in-person services.

This process yields effective therapeutic results, meets clinical standards, and reduces the overall expense of evaluations by eliminating the need for psychologist travel.

## JEFFERSON NEURO & TELEMENTAL HEALTHCARE

Psychological assessment of chronic pain is a highly specialized type of evaluation and its practitioners are limited and in high demand.

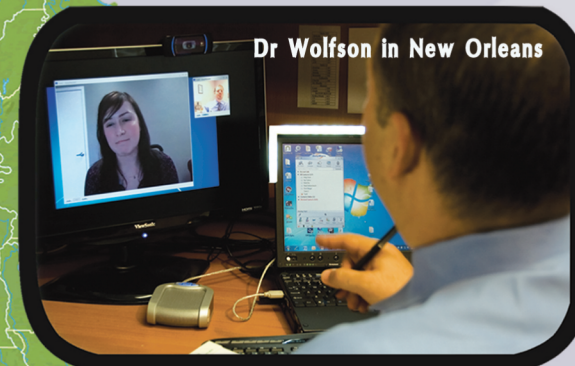

Since 1997, Jefferson Neurobehavioral Group has been on the forefront of research and practice in this field and has established branch offices in Texas, Alabama, Mississippi and throughout Louisiana, to keep pace with an ever-growing need.

Recent literature has shown a strong connection between identifiable demographic and psychosocial risk factors, and the ability to predict poor outcome following spinal surgery and other pain treatment interventions. Having this knowledge prior to invasive surgery or course of treatment can help patients and doctors manage expectations and outcomes more effectively.

Employing HIPAA-compliant telemental healthcare, within its regional branch office network, allows Jefferson Neurobehavioral Group to offer its highly specialized evaluation services more efficiently than other practitioners and at a lower overall cost.

## HOW IT WORKS

- ▶ Your patient arrives at any Jefferson Neuro regional office
- ▶ A Jefferson Neuro technician greets and guides your patient through our intake process (forms are available to download for advance completion at [JeffersonNeuro.com/telemetal.html](http://JeffersonNeuro.com/telemetal.html))
- ▶ A secure audio-video connection is established between the Jefferson Neuro branch and main offices
- ▶ Dr. Wolfson conducts a clinical interview remotely from the Jefferson Neuro main office
- ▶ Trained psychometrists perform in-person psychological testing at the remote location
- ▶ Following the evaluation, Dr. Wolfson generates and distributes his report back to you, in the same manner as a traditional in-person assessment

## FREE DEMO

If you are interested in learning more about telemental healthcare available through Jefferson Neurobehavioral Group, please contact our main office today with any questions or to schedule a free online demonstration.
